

## CIRCOMETER CJU - extra wide

This simple and robust measuring tape is used to measure outside circumferences of rotation-symmetric resp. round parts. At the same time the diameter as well as the circumference can be read with a reading of 0,1 mm.

With the CIRCUMETER CJU standard design the tape width is 16 mm. Moreover an extra small design with 6 mm tape width for use in tight spaces as well as designs with a wider tape are available.

The extra wide design with 35 mm tape width eases the use because the circumference tape lays itself automatically on the outside circumference. The measurement can be done faster and safer.

The following measuring ranges are available:

type	diameter [mm]	circumf. [mm]	accuracy [mm]	code
CJU 950 - 35	20 - 300	60 - 950	± 0,15	620 00915
CJU 2200 - 35	300 - 700	940 - 2200	± 0,20	620 00918
CJU 3460 - 35	700 - 1100	2190 - 3460	± 0,20	620 00928
CJU 4720 - 35	1100 - 1500	3450 - 4720	± 0,25	620 00936
CJU 5980 - 35	1500 - 1900	4710 - 5980	± 0,30	620 00911
CJU 7230 - 35	1900 - 2300	5970 - 7230	± 0,35	620 00912
