Brochure 1940

Rotating high performance centre
for heavy-duty machining,
with 2 roller bearings (1936)

Lathe with rotating high performance
centre from BRUCKNER

Company premises in Stuttgart 1920

New building 1963 in Weinstadt-Grossheppach

The founder, Karl Bruckner

In 1918 Karl Bruckner founded his engineering workshop in Stuttgart and laid the cornerstone for a success story which continues today – more than 90 years on. Initially the business focused on the repair and overhaul of machines but his ability to find innovative solutions to technical problems led him to rapidly obtain orders for his own designs of pedestal grinders and small lathes.

Karl-Georg Bruckner

He commenced manufacture of lathe centres and in 1920 as a pioneer in this field he developed and produced his first rotating tailstock centre.

On the early death of Karl Bruckner in 1931 his son Karl Georg Bruckner took over management of the company. By the

end of 1944 bombs had destroyed the factory, which he rebuilt under the very difficult conditions of 1945. In the following years Karl Georg focused on manufacturing and developing both live and dead centres. Diligently and ambitiously he expanded the company and its distribution network.

The company's relocation to its present premises in Weinstadt-Grossheppach about 25 kilometers away was an important step for the company's future growth. In 1979 Karl Georg handed over management of the company to his daughter Hilde and his son Karl-Friedrich. In 1984 the youngest son Manfred joined the company and its management.

> The Present

Administration building

Production halls

Measuring room

Todays product range well illustrates the unending Bruckner quest for perfection and precision.

A highly qualified and motivated staff is committed to fulfilling customer demands.

The application of high precision machine tools and the highest in-house standards of measurement have decisive influences on manufacturing.

Entrepreneurial activity, responsibility to employees and business partners, with commitment to innovation and uncompromising quality have been the decisive policy for the mission of this medium sized family owned company, these values being continuously passed to the fourth generation.

Concentricity testing

So Bruckner products by their accuracy and durability directly contribute to the raising of productivity and achievement of international recognition.

Conventional turning

() = catalogue pages

Operation requirements		Recommended series/types						
Workpiece accuracy ≥ 0.004 mm		S Series (9-15)						
Workpiece accuracy ≤ 0.003 mm		S Series 3µm (9-15)		LK Series 3µm (22-25)				
High workpiece surface finish		LK Series (22-25)						
Hard workpieces (hard turning)								
High live centre rigidity		NC Series (18-21)						
Elimination of or minimum vibrations during operation								
Heavy coolant flow		NC Series (18-21)						
High r.p.m. (> 5.000 1/min.)		NC Series (18-21)		LK Series (22-25)				
Long shafts		LR Series (26-31)		LD Series (32-35)				
Thermal expansion of workpiece due to machining		ZA Series (46-51)						
Large workpiece centres/bores				Type LDA (33)				
Variable clamping possibilities for different workpieces		Types SE/SEG (14/15)	Type NCE (20/21)	Type LRE (30/31)	Type LDE (34/35)			
High rate of wear on the 60° centre point angle								
Wear reduction on the 60° angle by carbide tipping		Types SH/SHG (12)	Types SV/SVG (13)	Types LKH/LKHG (25)				
Tailstock without hydraulic force adjustment		LR Series (26-31)						
Controlling the axial force								
Face driver application with mechanical tailstock		S Series (9-15)		LD Series (32-35)				
Face driver application with hydraulic tailstock		A Series (16/17)		NC Series (18-21)				
Tailstock sleeve design prevents convenient removal of live centre		LK Series (22-25)						

CNC turning

Operation requirements		Recommended series/types						
Workpiece accuracy ≥ 0.004 mm		S Series (9-15)		NC Series (18-21)				
Workpiece accuracy ≤ 0.003 mm		S Series 3µm (9-15)		LK Series 3µm (22-25)				
High workpiece surface finish		LK Series (22-25)						
Hard workpieces (hard turning)								
Elimination of or minimum vibrations during operation		NC Series (18-21)						
Heavy coolant flow								
High r.p.m. (> 5.000 1/min.)		NC Series (18-21)		LK Series (22-25)				
Long shafts		LR Series (26-31)		LD Series (32-35)

Wear reduction on the 60° angle by carbide tipping		Types SH/SHG (12)	Types SV/SVG (13)	Types LKH/LKHG (25)				
Tailstock without hydraulic force adjustment		LR Series (26-31)						
Controlling the axial force								
Face driver application with mechanical tailstock		S Series (9-15)						
Face driver application with hydraulic tailstock				LD Series (32-35)				
Compensation for varying centre depths and length tolerances of the workpiece at fixed preset tailstock and turret positions		LR Series (26-31)		T Line (36-39)				
Centre in second counter spindle		A Series (16/17)						
Tailstock sleeve design prevents convenient removal of live centre				NC Series (18-21)				
		LK Series (22-25)						

Cylindrical grinding

() = catalogue pages

Operation requirements	Recommended series/types	
Workpiece accuracy	S Series 3µm with additional sealing (9-15)	LK Series 3µm (22-25)
High workpiece surface finish		LK Series 3µm (22-25)
Elimination of or minimum vibrations during operation		
Heavy coolant flow	S Series 3µm, with additional sealing (9-15)	
Long shafts	S Series 3µm with additional sealing (9-15)	LK Series 3µm (22-25)
Large workpiece centres/bores	ZA Series 3µm (46-51)	
Variable clamping possibilities for different workpieces	Type SEG with additional sealing (14/15)	
Wear reduction on the 60° angle by carbide tipping	Type SHG with additional sealing (12)	Type SVG with additional sealing (13)
Tailstock sleeve design prevents convenient removal of live centre	A Series 3µm with additional sealing (16/17)	LK Series 3µm (22-25)

Heavy-duty machining

Characteristics/operation requirements	Recommended series/types	
Without tailstock sleeve support, without expansion compensation	Types M/MG, Types AM/AMG (42)	
Without tailstock sleeve support, with expansion compensation and pressure indication	Types MZ/AMZ (44/45)	
With tailstock sleeve support, without expansion compensation	Types MR/MRG (43)	
With tailstock sleeve support, with expansion compensation and pressure indication	Type MZR (44/45)	
High workpiece surface finish	Types MR/MRG (43)	Type MZR (44/45)
Thermal expansion of workpiece due to machining	Types MZ/AMZ (44/45)	
Large workpiece centres/bores	ZA Series (46-51)	
Tailstock sleeve design prevents convenient removal of live centre	Types AM/AMG (42)	Type AMZ (44/45)
Interrupted cut/out of balance workpiece	Types MR/MRG (43)	Type MZR (44/45)

Measuring/testing

Operation requirements	Recommended series/types		
Workpiece accuracy ≤ 0.003 mm and more	S Series 3µm (9-15)	LD Series 3µm (32-35)	
Long shafts	S Series 3µm (9-15)	LK Series 3µm (22-25)	
Large workpiece centres/bores	ZA Series 3µm (46-51)		
Variable clamping possibilities for different workpieces	Type SEG (14/15)		
Wear reduction on the 60° angle by carbide tipping	Type SHG (12)	Type SVG (13)	Type LKHG (25)
Tailstock sleeve design prevents convenient removal of live centre	A Series 3µm (16/17)	LK Series 3µm (22-25)	

BRUCKNER WORKS STANDARD

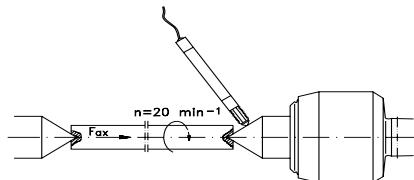

Our high performance live centres – standard as well as special designs – are produced and tested according to our works standard. Materials, production and testing are subject to strict quality guidelines guaranteeing function and performance of our tools.

Test report for concentricity accuracy

Every single BRUCKNER high performance live centre is tested for its runout under axial load. The test result is stamped into the high performance centre and is guaranteed by the test report.

Example: table „maximum runout“ for types S, SG

Type S	Type SG	Morse taper	Runout max. Type S	Runout max. Type SG	Fax daN
5001	5121	1	0.005	0.003	80
5001-2	5121-2	2	0.005	0.003	80
5001-3	5121-3	3	0.005	0.003	80
5002	5122	2	0.005	0.003	160
5003	5123	3	0.005	0.003	160
5006	5126	3	0.005	0.003	210
5004	5124	4	0.005	0.003	210
5007	5127	4	0.005	0.003	450
5005	5125	5	0.005	0.003	600
5008	5128	5	0.005	0.003	600
5009	5129	6	0.005	0.003	600

Tolerance of taper shank

The Morse taper is ground according to DIN 228 AT4 (gauge accuracy). This fine tolerance guarantees a close fit of the high performance centre in the tailstock and therefore the full utilisation of the concentricity accuracy.

Precision bearings

The bearing seats in the housing and on the centrepoint are precision-ground. The bearings and their seats are selected to fit.

Result: high stability, concentricity and long life.

Load values

The load values given in our tables are calculated with the world wide acknowledged software KISSsoft. When used in keeping with currently valid standards DIN and ISO, this software guarantees a safe and reliable load calculation.

Centrepoin

The centrepoin is of through-hardened alloy tool steel resistant to wear.

Housing

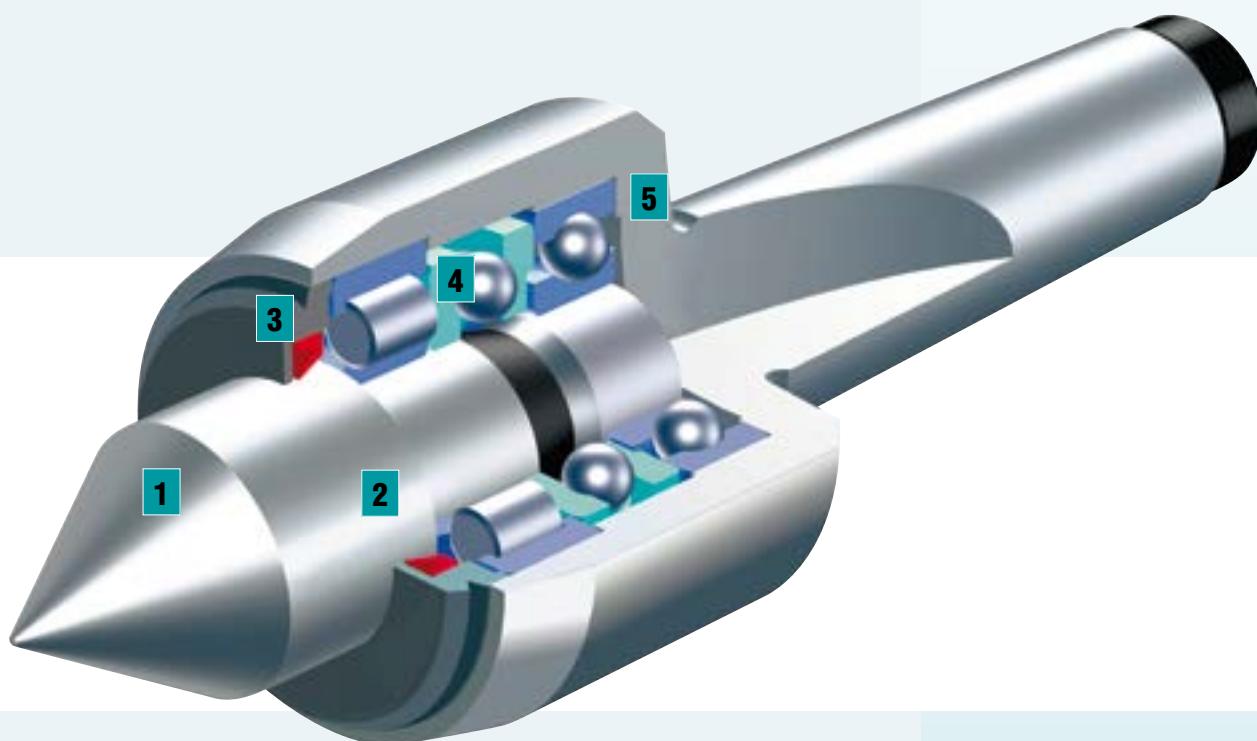

The housing is of alloy tool steel with high tensile strength. Housing head and shank are case-hardened for protection from damage.

Maintenance

The bearings are maintenance-free due to permanent lubrication.

Repair service

Our repair service is at your disposal for any repairs. We judge the tool's condition and inform you about the extent of necessary repairs.

S Series – the classic design with head bearings

The all-rounder of our high performance live centres. The centres from our S series offer the user an economic solution for almost every standard workholding situation. From turning and cylindrical grinding to measuring and inspection, centres of the S series fulfil the high requirements of performance, precision and tool life.

Two types:

- ▶ Slim design for light-duty work
- ▶ With stronger bearings for normal to high-duty service

1 **High concentricity accuracy**
tested under axial load
guaranteed with test report

2 **Centrepoint**
of through-hardened alloy tool steel

3 **Seal ring**
protects the bearings from dirt and coolant. Optionally available with supplementary seal (page 10)

4 **Large-dimensioned precision roller bearings**
for supporting the radial and axial forces.
Maintenance-free due to permanent lubrication

5 **Housing**
of high tensile alloy tool steel
housing and shank are case-hardened to protect from damage

Types S, SG

Centrepoint 60°

Runout

Type S max. 0.005 mm

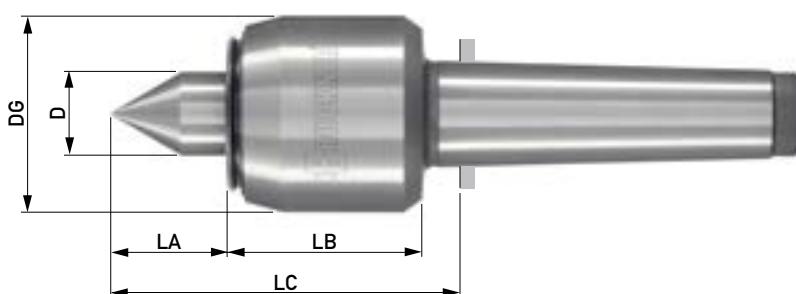

Type SG max. 0.003 mm

with test report

Application

Type S – conventional turning,
CNC turning, roughing,
finishing

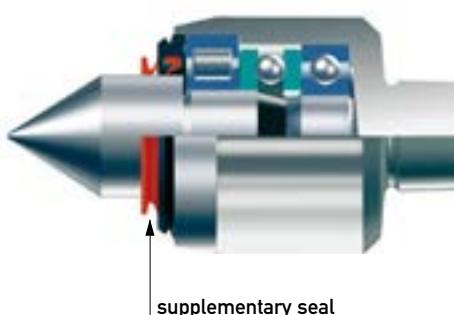

Type SG – for turning and grinding
operations demanding
high accuracy, measuring

Supplementary seal

For operations involving heavy flows of coolant or large quantities of dust and dirt (e.g. cylindrical grinding), a supplementary seal can be fitted onto the centrepoint.

The seal turns together with the centrepoint, seals the protection cap and additionally works as a splash ring.

Radial – Types S, SG

Axial – Types S, SG

Types SKOP, SKOPG

Centrepoint 60°/40° extended

Runout

Type SKOP max. 0.005 mm
Type SKOPG max. 0.003 mm

with test report

Application

Whenever the working distance between centre and workpiece is confined.

The extended, slim centrepoint can enlarge this space.

Type SKOP – conventional turning,
CNC turning, roughing,
finishing

Type SKOPG – for turning operations
demanding high accuracy

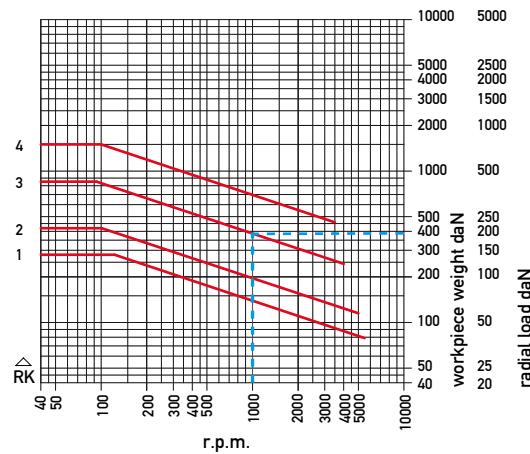

Type SKOP	ID.No.	5362	5363	5366	5364	5367	5365

* observe the load graphs

Radial and axial loads for a bearing life of 2000 operating hours

Radial – Types SKOP, SKOPG

Axial – Types SKOP, SKOPG

Determination of admissible load

Example: Type SKOP 5367, MT 4

Load graph: radial RK3/axial AK3
Permissible load at 1000 r.p.m.

Radial load $F_R = 190$ daN
Workpiece weight $F_W = 380$ daN
Axial load $F_A = 510$ daN
The radial load F_R determines the radial load capacity of a centre.

$$F_R = \frac{F_W}{2} \pm \text{radial cutting forces + centrifugal force}^{**}$$

**for unbalanced workpieces
(1 daN = 1,02 kp)

Types SH, SHG

Centrepoint 60° carbide-tipped

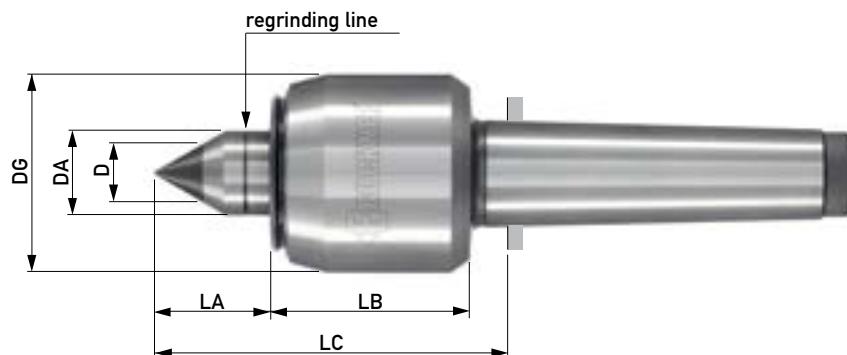

Regrindable to the regrinding line

Runout

Type SH max. 0.005 mm

Type SHG max. 0.003 mm

with test report

Application

For cylindrical grinding and turning operations during which additional stress is put on the centrepoint (e.g. large series, change of workpiece when spindle is turning, hard workpieces, extremely small workpiece centres).

For cylindrical grinding operations we recommend the use of our **supplementary seal** (fig. on page 10)

Type SH	ID.No.	5241-2	5241-3	5242	5243	5246	5244	5247	5245	5249

Radial – Types SH, SHG

Axial – Types SH, SHG

Types SV, SVG

Centrepoint 60° full carbide with safety core **sa•co®**

Regrindable to the braze line

Runout

Type SV max. 0.005 mm

Type SVG max. 0.003 mm

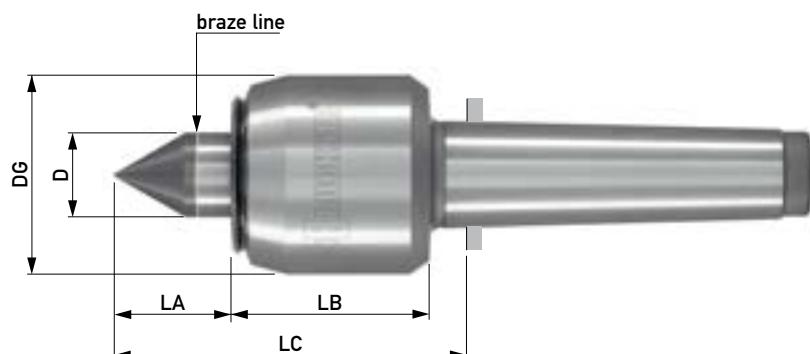

with test report

Application

Same as type SH, SHG.

The point angle of 60° up to the large diameter can be utilised for loading workpieces.

For cylindrical grinding operations we recommend the use of our **supplementary seal** (fig. on page 10)

sa • CO®
safety core from BRUCKNER

A safety core is integrated in the carbide point of types SV, SVG.

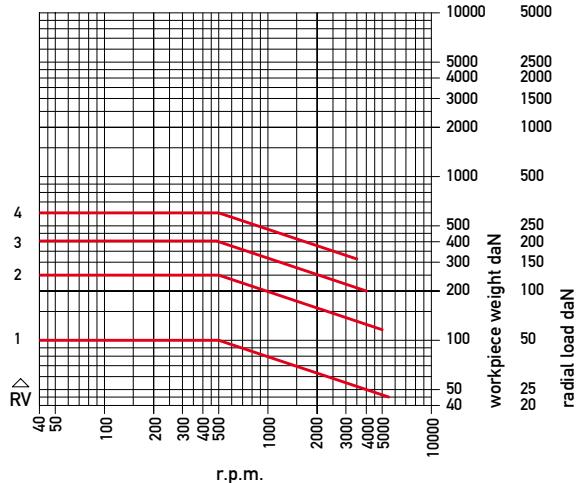

If the interface of carbide and basic material becomes overstressed, e.g. through operating error or mishandling, the safety core prevents the carbide with the loaded component from slipping. Thus high consequential damage is avoided.

Type SV	ID.No.	5242ZV20	5243ZV20	5246ZV25	5244ZV25	5247ZV35	5245ZV45

Radial – Types SV, SVG

Axial – Types SV, SVG

Types SE, SEG

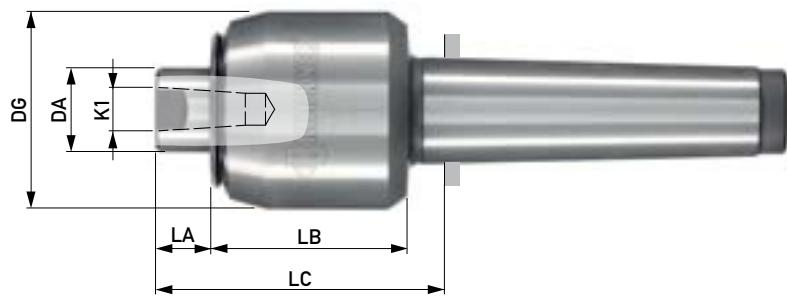

Centre spindle with 1:7.5 internal taper
for interchangeable inserts

Runout

Type SE max. 0.005 mm

Type SEG max. 0.003 mm

with test report

Application

For one off, small and large series production,
measuring.

Advantages

As the centre spindle wears only the insert
has to be changed and once again the high
performance centre is ready for use. Flexibility
in application is made possible by a choice of
eight different insert styles (page 15).

Depending on the style the insert can be
removed by its draw-off thread and draw-off
nut or with spanners applied to the spanner
flats.

For cylindrical grinding operations we
recommend the use of our
supplementary seal (fig. on page 10)

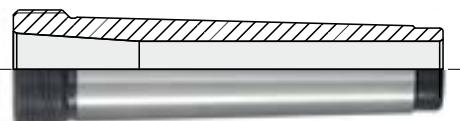

Type SE	ID.No.	5482	5483	5486	5484	5487	5485

Installation paste

Makes insert change easier.

Apply thinly and evenly to the insert taper.

Version A

with draw-off thread

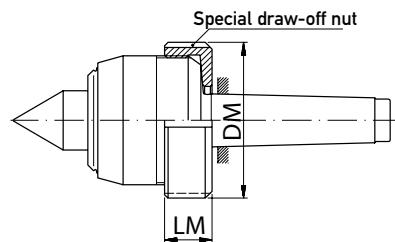

Application

With blind tailstock sleeve (without the possibility to remove the centre via a through hole) or for high precision machine tools to protect the spindle bearings or the tailstock sleeve.

For cylindrical grinding operations we recommend the use of our **supplementary seal** (as shown on page 10).

Special draw-off nut

This nut assures centre removal from the tailstock even if the sleeve diameter is smaller than the centres housing diameter.

Types AS, ASG

Radial – Types AS, ASG

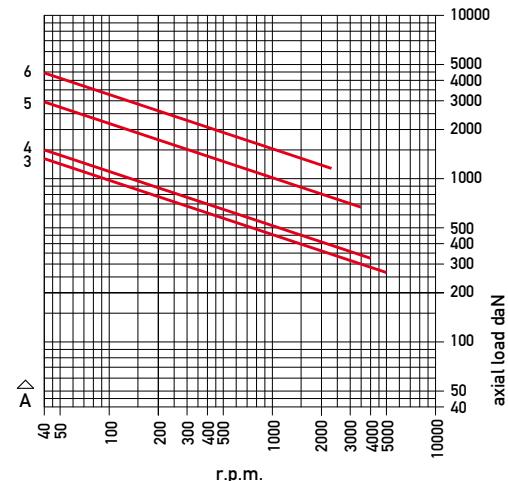

Radial – Type ASKOP

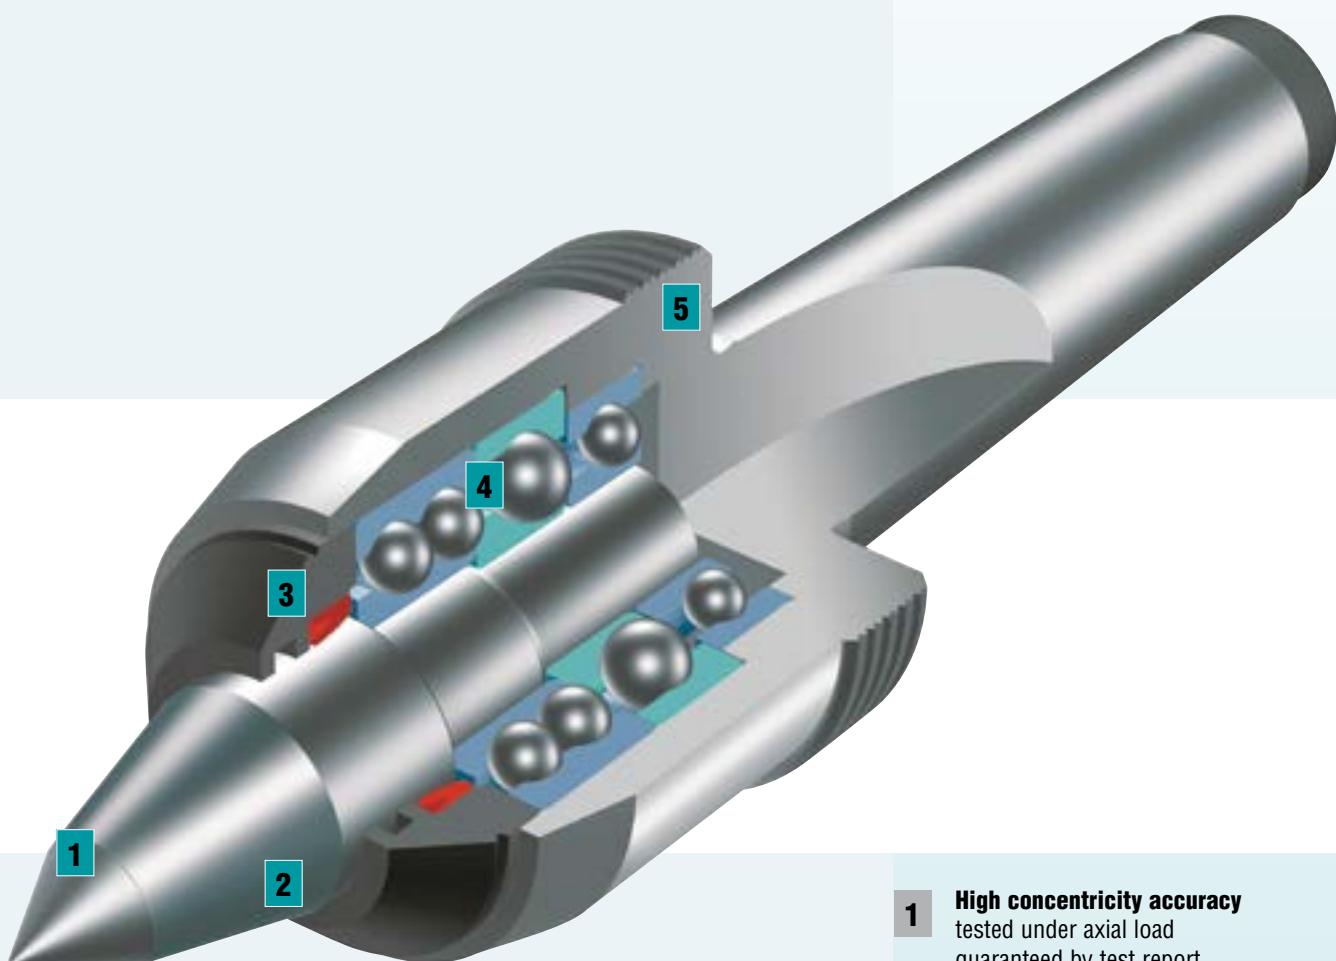

Radial – Type ASHG

Axial – all A Types

NC Series – a class on its own

TOP SEAL SYSTEM

The BRUCKNER TOP-SEAL-SYSTEM provides a triple-layer protection from dirt and coolant (see the principle on page 20). The robust precision bearings have been specially designed for turning operations requiring high r.p.m. The NC series user works with high performance centres showing their class particularly when „the going gets tough“.

Two types:

- ▶ Slim design for ease of access, minimum rolling resistance for small and medium work through low-friction bearings
- ▶ With extra high duty bearings for higher loads

1 **High concentricity accuracy**
tested under axial load
guaranteed by test report

2 **Through-hardened alloy tool steel**
centrepoint

3 **TOP-SEAL-SYSTEM**
protects the bearings from
dirt and coolant

4 **Large-dimensioned precision**
roller bearings
robust bearings to absorb the radial
and axial forces.
Maintenance-free due to permanent
lubrication

5 **Housing**
of high tensile alloy tool steel.
Housing and shank are case-hardened to protect from damage

Types NC 33, NC 43

For high r.p.m.

Centrepoint 60°/40°

with draw-off thread

Runout

max. 0.005 mm, with test report

Application

For turning operations requiring high r.p.m.

Triple-layer protection of bearings from penetration of coolant by the

TOP-SEAL-SYSTEM (principle on page 20)

Radial and axial loads for a bearing life of 2000 operating hours (calculation example on page 11)

Radial – Type NC

Axial – Type NC

Types NCE 34, NCE 44

For high r.p.m.

Centre spindle with internal taper 1:7.5

for interchangeable inserts

with draw-off thread

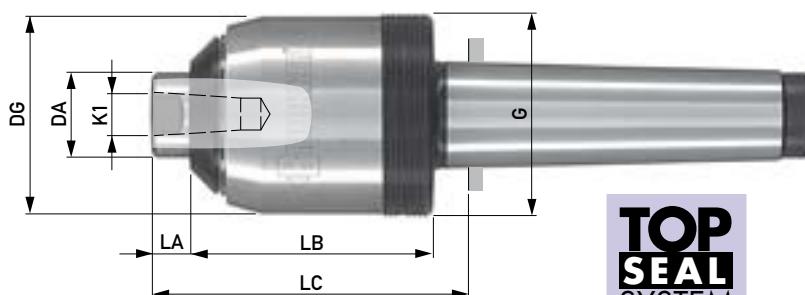

Runout

max. 0.005 mm, with test report

Application

Variable clamping possibilities for CNC turning through interchangeable inserts. In the case of a collision or insert wear, type NCE offers the advantage that, simply by changing the insert, the high performance centre is immediately ready for use again.

Multiple use is made possible by eight different insert styles (page 21).

Load	The load of type NCE is limited by the interchangeable inserts (page 21)								

The thread structure of the ID.Nos. 34.045-2 and 34.045-3 is similar to that of version A, fitting the special nut for version A (page 16).

BRUCKNER TOP-SEAL-SYSTEM

- The coolant does not impact the seal, but flows with reduced energy into the first labyrinth channel.
- There the largest part of the coolant is drained through the first drain aperture.
- The small residue is wiped off the seal into the second labyrinth channel and flows through the second drain aperture.

Installation paste

Makes insert change easier.

Apply thinly and evenly to the insert taper.

LK Series – with superior stiffness

This high performance live centre was developed for use with advanced turning and grinding technology.

With a short design, the bearings and pitch of the bearings distance are matched so that this high performance centre withstands vibrations in all machining situations.

The bearings are designed for higher r.p.m.

Result

- ▶ Excellent surface quality
- ▶ Longer tool life
- ▶ Improved machine tool efficiency

Two types for MT4 and MT5

- ▶ Slim design for light machining
- ▶ With stronger bearings for normal to heavy machining

1 High concentricity accuracy
tested under axial load
guaranteed by test report

2 Through-hardened alloy tool steel centrepoint

3 Seal ring
protects the bearings from dirt
and coolant

4 Precision bearings
bearings seats of housing and
centre spindle are precision ground
and matched to the bearings.
Maintenance-free due to permanent
lubrication

5 Housing
of high tensile alloy tool steel.
Housing head and shank are
case-hardened for protection against
damage

Types LKS, LKSG

Centrepoint 60°

Runout

Type LKS max. 0.005 mm

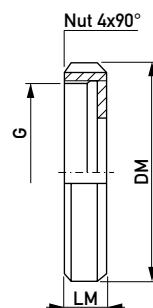

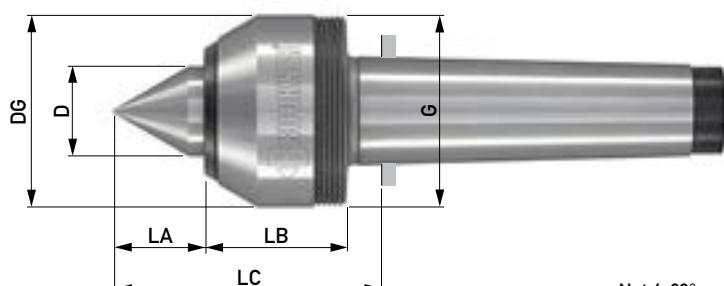

Type LKSG max. 0.003 mm

with test report

Application

High performance turning, hard turning, fine turning, cylindrical grinding.

Optimum workpiece surface finish due to the short stable anti-vibration design.

LR Series – simultaneous clamping and regulation

The spring loaded centrepoint with coloured rings for pressure indication allows simple adjustment and reading of the axial pressure.

The spring loading compensates for workpiece thermal expansion and variation of workpiece length. LR series centres are essential for operations using face drivers or machine tools without pressure indication.

The ideal arrangement of the high precision roller bearings prove the strength of the LR types for higher speed.

1 **High concentricity accuracy**
tested under axial load
guaranteed by test report

2 **Spring loaded centrepoint**
of through-hardened alloy wear
resistant tool steel. With coloured
rings for pressure indication

3 **Seal ring**
protects the bearings from dirt and
coolant

4 **Precision bearings**
with precision ground bearing seats
of housing and on the centre spindle.
The bearing seats are matched to the
bearings. Maintenance-free due to
permanent lubrication

5 **Spring loading**

6 **Housing**
of high tensile tool steel.
Housing head and shank are case
hardened for protection against
damage

Types LRS, LRSG

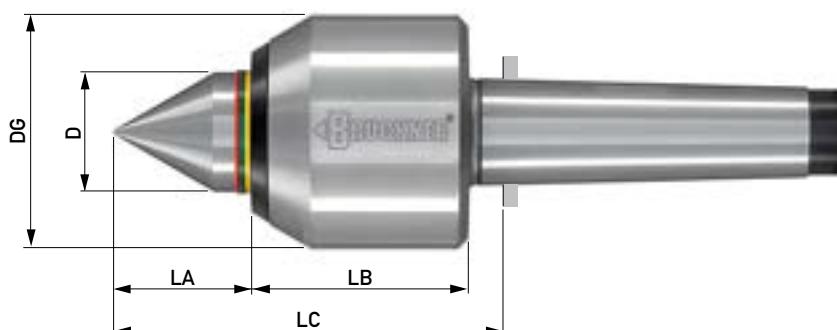

Centrepoint 60° spring loaded
Pressure indication by coloured rings

Runout

Type LRS max. 0.005 mm

Type LRSG max. 0.003 mm

with test report

Application

Turning, CNC turning with multi-spindle machines or CNC lathes with twin tool turrets.

As a tailstock centre when using face drivers

Type LRV

Centrepoint 60°/40° extended
spring loaded with pressure indication
by coloured rings

Runout

max. 0.005 mm with test report
max. 0.003 mm high precision design
on request

Application

Turning, CNC turning.
With multi-spindle machines or CNC lathes
with twin tool turrets.
As a tailstock centre when using face
drivers. The extended slim centrepoint
allows improved access for cutting tools

Radial – Type LRV

Axial – Type LRV

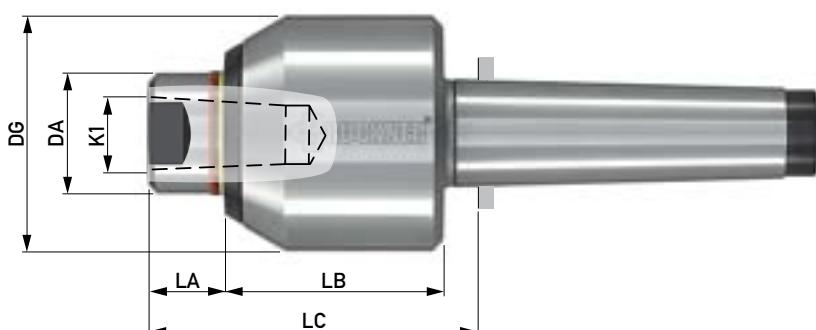

Type LRE

Spring loaded centre spindle with 1:7.5 internal taper for interchangeable inserts.

Pressure indication by coloured rings

Runout

max. 0.005 mm with test report
max. 0.003 mm high precision design
on request

Application

Turning, CNC turning with multi-spindle machines or CNC lathes with twin tool turrets.

As a tailstock centre when using face drivers.

Advantages

As the centrepoint wears only the insert has to be changed and once again the high performance centre is ready for use. Flexibility in application is made possible by a choice of eight different insert styles (page 31).

Depending on the style the insert can be removed by its draw-off thread and draw-off nut or with spanners applied to the spanner flats.

Installation paste

Makes insert change easier.
Apply thinly and evenly to the insert taper.

Technical features:

- ▶ Spring loaded centres with pressure indication by yellow, green, red rings.
- ▶ Designed for high radial and axial loads and for higher speeds.
- ▶ High precision bearings in the head of the housing and within the taper. The bearing seats of housing and centre spindle are matched to the bearings and ground to precise tolerances.
- ▶ High concentricity accuracy tested under axial load and guaranteed with test report.
- ▶ Housings and centre spindles are hardened.
- ▶ Rotary seals protect bearings from dirt and coolant.
- ▶ Maintenance-free due to permanent lubrication.

Applications:

- ▶ Multi-spindle machines
- ▶ CNC lathes without tailstock
- ▶ CNC lathes with opposed spindle

Heavy workpieces – safe clamping, precision machining

The live centre is an important element in a load system of a heavy-duty machine tool and plays a decisive role in the final machining result.

The BRUCKNER design is especially suited to the high requirements of heavy-duty machining.

The maximum admissible load depends on the mounting taper diameter and we therefore offer a choice of two different designs:

- Load carried only on the taper
- Load carried on the taper with additional tailstock-sleeve support

The formula is applicable when the workpiece weight F_w is equally divided between headstock and tailstock. If the component has an irregular shape, the weight has to be split up correspondingly. The radial cutting force F_s has to be either a positive or negative figure, depending on the direction of rotation. Any unbalance of the workpiece has to be allowed for with the centrifugal force F_f .

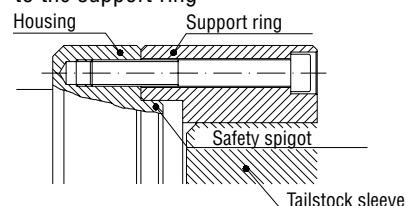

1 High concentricity accuracy

2 Shaft seal ring
protects the bearings from dirt and coolant

3 Housing
high quality material, forged, therefore uniform grain structure, tensile strength approx. 1000 N/mm²
Head and shank hardened

4 Large zero clearance precision roller bearings
to absorb radial and axial forces.
No bearings in the taper shank.
Bearing seats in the housing and on the centre spindle are precision ground to ultra fine tolerances.
The bearings and their seats are selected for optimum fit.
Maintenance-free due to permanent lubrication

5 Safety spigot (patented)
acts as an additional safeguard when connecting the centre housing to the support ring

Load capacity of live centres for heavy-duty machining

The data for workpiece weight and load given in our tables and diagrams are based on the dynamic state of the live centre. Taper and centrepoint cross sections are designed for actual operating criteria and not for static conditions. The load figures are calculated for the average diameter of the 60° angle.

The radial load measured on the clamping diameter of workpiece and centrepoint is relevant. The load can be determined by the following approximation formula:

$$F_R = \frac{F_w}{2} \pm F_s + F_f$$

F_R – radial load
 F_w – workpiece weight
 F_s – Radial cutting forces
 F_f – centrifugal force

BRUCKNER high performance live centres for heavy duty machining are used on lathes and cylindrical grinding machines in the heavy industry. Manufacturers of turbines, large engines, rollers, machined parts for the oil industry etc. focus on BRUCKNER high performance live centres due to their reliability, safety and accuracy.

Load values

The load values given in our tables are calculated with the world wide acknowledged software KISSsoft. When used in keeping with currently valid standards DIN and ISO, this software guarantees a safe and reliable load calculation.

Types M, MG

Centrepoint 60°, 75°, 90°

Types AM, AMG

With draw-off thread

Centrepoint 60°, 75°, 90°

for machines with tailstock sleeves without through bore

Runout

Type M, AM max. 0.008 mm

Type MG, AMG max. 0.004 mm

Types MG, 141006, 141006A max. 0.003 mm

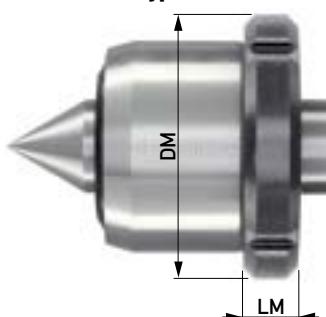

Application

For turning and grinding of heavy components,
e.g. turbines, rolls, crankshafts for large
engines, heavy transmission components

For operations with heavy coolant flows we
recommend the use of our supplementary
seal (page 10)

Radial – Types M, MG, AM, AMG

Axial – Types M, MG, AM, AMG

Types MR, MRG

with tailstock sleeve support ring
and patented safety spigot
Centrepoint 60°, 75°, 90°

Runout

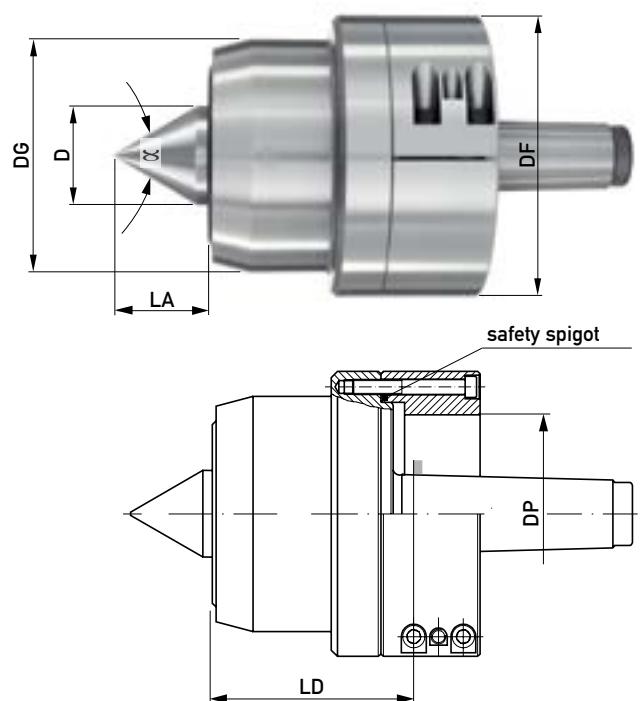

Type MR max. 0.008 mm

Type MRG max. 0.004 mm

Application

If, for very high workpiece weights the load capacity on the mounting taper is insufficient, the centre is additionally supported on the tailstock sleeve with a support ring. A patented safety spigot safeguards the screw fastening of the centre housing to the support ring.

The support also diminishes vibration and enhances the centre life.

Radial and axial loads for a bearing life of 2000 operating hours (see calculation example page 11)

Radial – Types MR, MRG

Axial – Types MR, MRG

Type MZ

with expansion compensation
and pressure indication by graduated dial
Centrepoint 60°, 75°, 90°

Runout

max. 0.008 mm
max. 0.004 mm on request

Application

If the axial pressure must not exceed or fall below a defined value to clamp the component safely or to avoid workpiece deformation.

When machining heavy workpieces prone to heat expansion.

Type MZ without draw-off thread

Type AMZ with draw-off thread

for machines with tailstock sleeve
without through bore (draw-off nut page 42)

Type MZR with tailstock sleeve support ring and patented safety spigot (page 40)

The tailstock sleeve support:

- ▶ makes the connection between tailstock sleeve and centre housing sturdier
- ▶ minimises the possibility of machining vibrations

We recommend our tailstock sleeve support design when

- ▶ machining heavy workpieces, unbalanced and/or interrupted cuts
- ▶ high quality workpiece surface finishes are required

Adjusting the clamping pressure

The tailstock pressure required is adjusted on the graduated dial. When clamping the component, the central measuring pin is lifted in proportion to the travel of the centre spindle.

The required clamping force is reached when measuring pin and scaling ring surface are level.

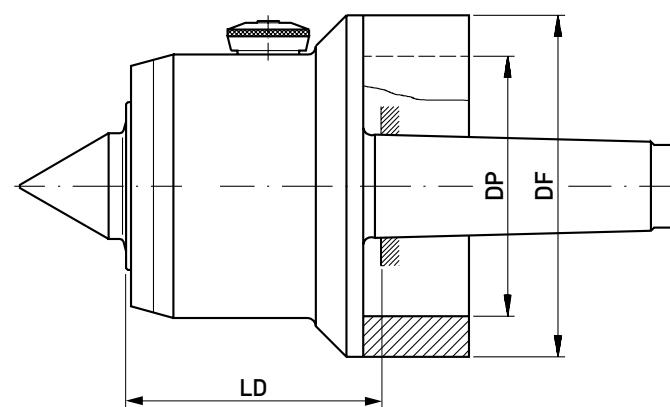

Pressure too low

Correct pressure

Pressure too high

BRUCKNER WORKS STANDARD

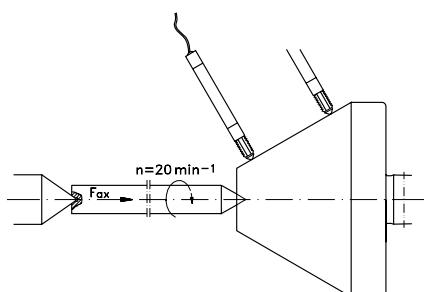

Our high performance bullnose live centres – standard as well as special designs – are produced and tested according to our own stringent works standard. Materials, production and testing are subject to strict quality guidelines guaranteeing function and performance of our tools.

Test report for concentricity accuracy

Every single BRUCKNER high performance bullnose live centre is tested for its runout under axial load. The test result is then stamped into the centre and is guaranteed by the test report and quality guidelines guaranteeing function.

Example: table „maximum runout“ for types ZA, ZAG

Type ZA	Type ZAG	Morse taper	Runout max.		Fax daN
			Type ZA	Type ZAG	
1920-1922	2120-2122	2	0.007	0.003	160
1930	2130	3	0.007	0.003	160
1831-1933	2031-2133	3	0.007	0.003	210
1841-1941	2041-2141	4	0.007	0.003	210
1942-1947	2142-2147	4	0.007	0.003	450
1952	2152	5	0.007	0.003	450
1953	2153	5	0.007	0.003	600
1954-1959	2154-2159	5	0.007	0.003	600
1964-1970	2164-2170	6	0.007	0.003	600
1983-1985	2183-2185	6	0.007	0.003	600

Bullnose centre head and taper shank

The bullnose centre head is of wear-resistant, through-hardened alloy tool steel. In contrast to usual case-hardening, this allows the head of the centre to be reground several times without any loss of hardness. The taper shank is case hardened for protection from damage.

Tolerance of taper shank

The Morse taper is ground according to DIN 228 AT4 (gauge accuracy). This fine tolerance guarantees a close fit of the high performance bullnose centre in the tailstock and the full utilisation of the concentricity accuracy.

Load values

The load values given in our tables are calculated with the world wide acknowledged software KISSsoft. When used in keeping with currently valid standards DIN and ISO, this software guarantees a safe and reliable load calculation.

Precision bearings

The bearings are selected according to the size of the Morse taper. The bearing seats of the head and the taper shank are matched to the bearings and ground to precise tolerances. Bearings and their seats are selected to fit.

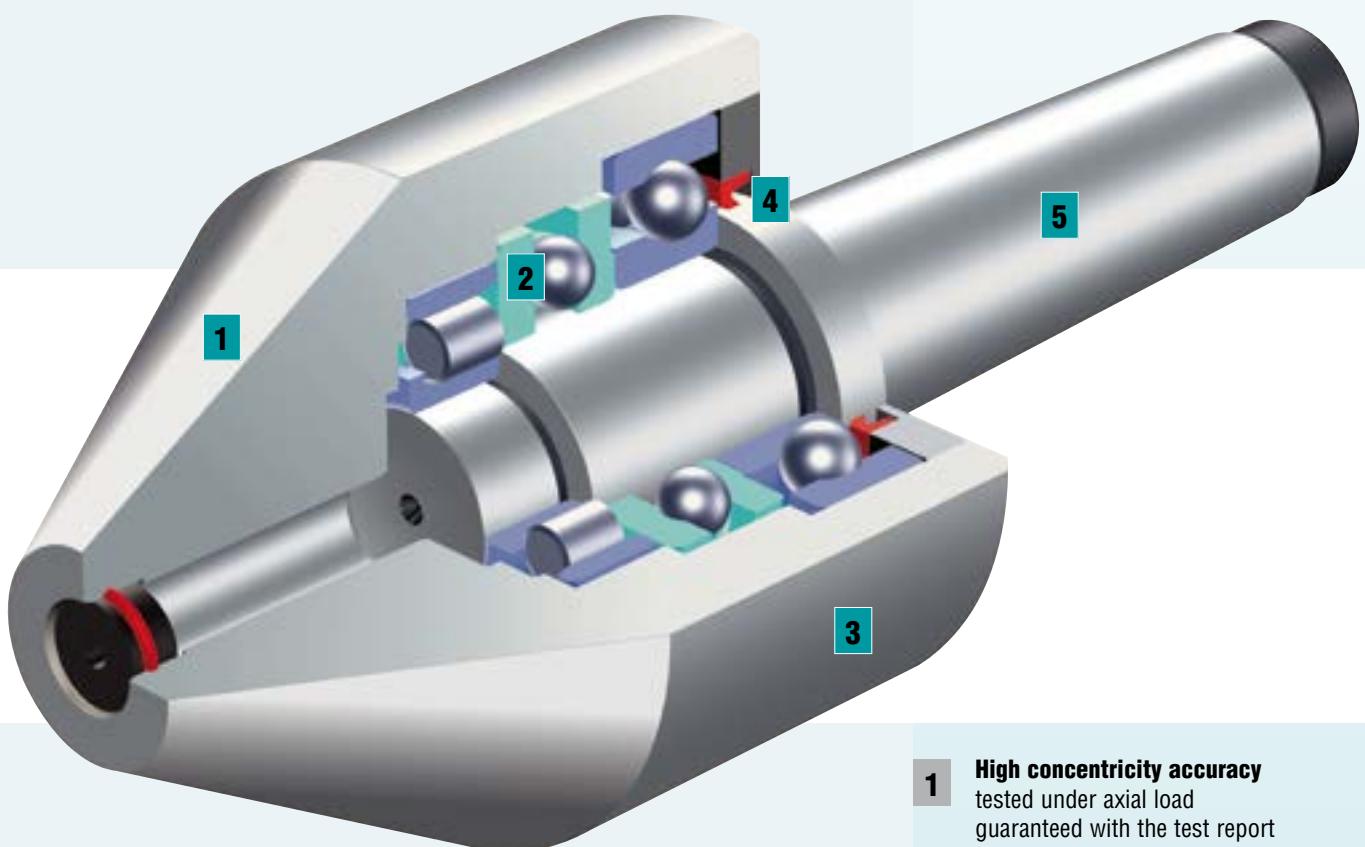

Result: high stability, minimum runout and long life.

Maintenance

The bearings are maintenance free due to permanent lubrication.

Repair service

Our repair service is at your disposal. We judge the tool's condition and inform you about the extent of necessary refurbishment.

Robust and precise

Our bullnose live centres have sturdy roller bearings where the loads are heaviest. Combined with large axial and radial deep section ball bearings this design allows high loads with high concentricity and long life.

BRUCKNER bullnose live centres sustain their reliability even when conditions are tough. For cylindrical grinding operations BRUCKNER bullnose live centres are market leaders. Such work demands bullnose centres with reserves of stability for good grinding results.

1 **High concentricity accuracy**
tested under axial load
guaranteed with the test report

2 **Large precision roller bearings, free from clearance**
to withstand the axial and radial forces
Maintenance-free due to permanent lubrication

3 **Bullnose head**
of alloy tool steel, through-hardened

4 **Shaft seal**
protects the bearings from dirt and coolant

5 **Taper shank**
case hardened for protection from damage

Types ZA, ZAG

Angle 60°, 75°
without draw-off thread

Runout

Type ZA max. 0.007 mm
Type ZAG max. 0.003 mm
with test report

Application

For turning and grinding tubes and workpieces with large bores

Mechanical engineering

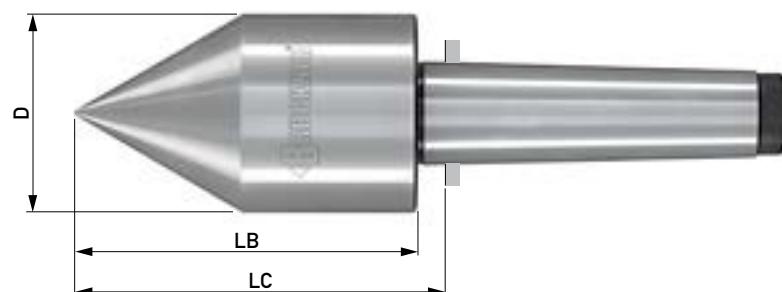

Main spindles for machine tools, hollow shafts, paper rolls, rings and gears

Car industry/Motor construction

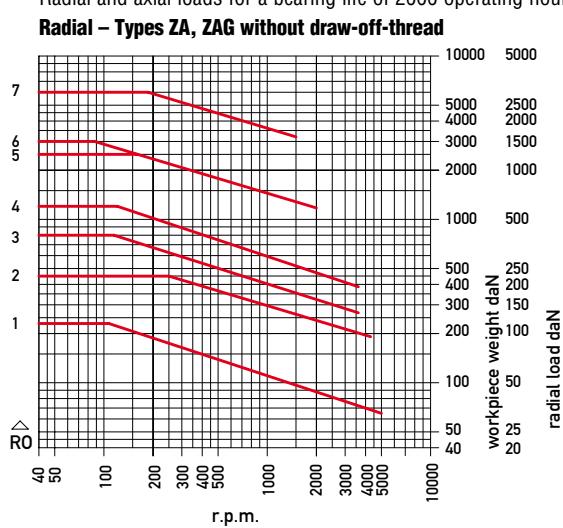

Truck axial tubes, pistons, cylinder liners, crankshafts, wheel hubs

Aircraft industry/Shipbuilding

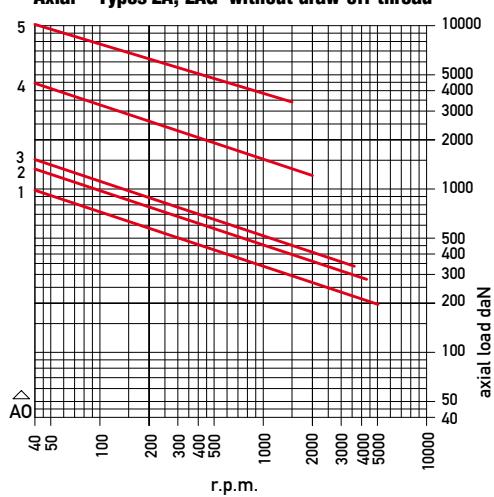

Engine main shafts and transmission components, turbines, drive shafts

HSK40

with sealing air connection

ABS50

large centrepoint

carbide spherical centre

live collet chuck

BRUCKNER WORKS STANDARD

Our high performance live centres – standard as well as special designs – are produced and tested according to our works standard. Materials, production and testing are subject to strict quality guidelines guaranteeing function and performance.

Regrinding line

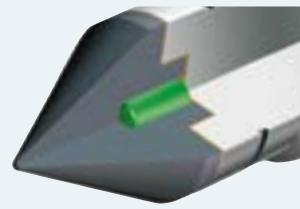

As a rule, BRUCKNER centres feature a regrinding line showing the useful end of the carbide. Forms R and GR do not have this line. Here the useful limit is marked by the braze line.

Regrinding line

Braze line (form R/GR)

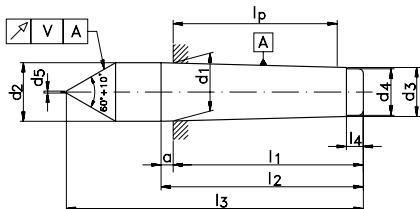

sa • co®

safety core from BRUCKNER

In BRUCKNER solid carbide dead centres (forms V, GV, Z, GZ and HZ) with a carbide diameter of 20 to 45 mm the **safety core sa•co®** is integrated.

If there is a fissure in the joint between carbide and base material, e.g. caused by operating or handling errors, **sa•co®** prevents the carbide point with the mounted workpiece from slipping. Thus high consequential costs are avoided.

Extract from DIN 806, DIN 228 and BRUCKNER WORKS STANDARD

V = permissible eccentricity

Z = maximum taper error

taper increasing towards the large diameter along the tested length l_p

User information

In our „User information“ you will find hints and tips for the use of our carbide centres, e. g. on work safety, causes and removal of roundness errors on the workpiece etc.

Please advise us if you would like copies.

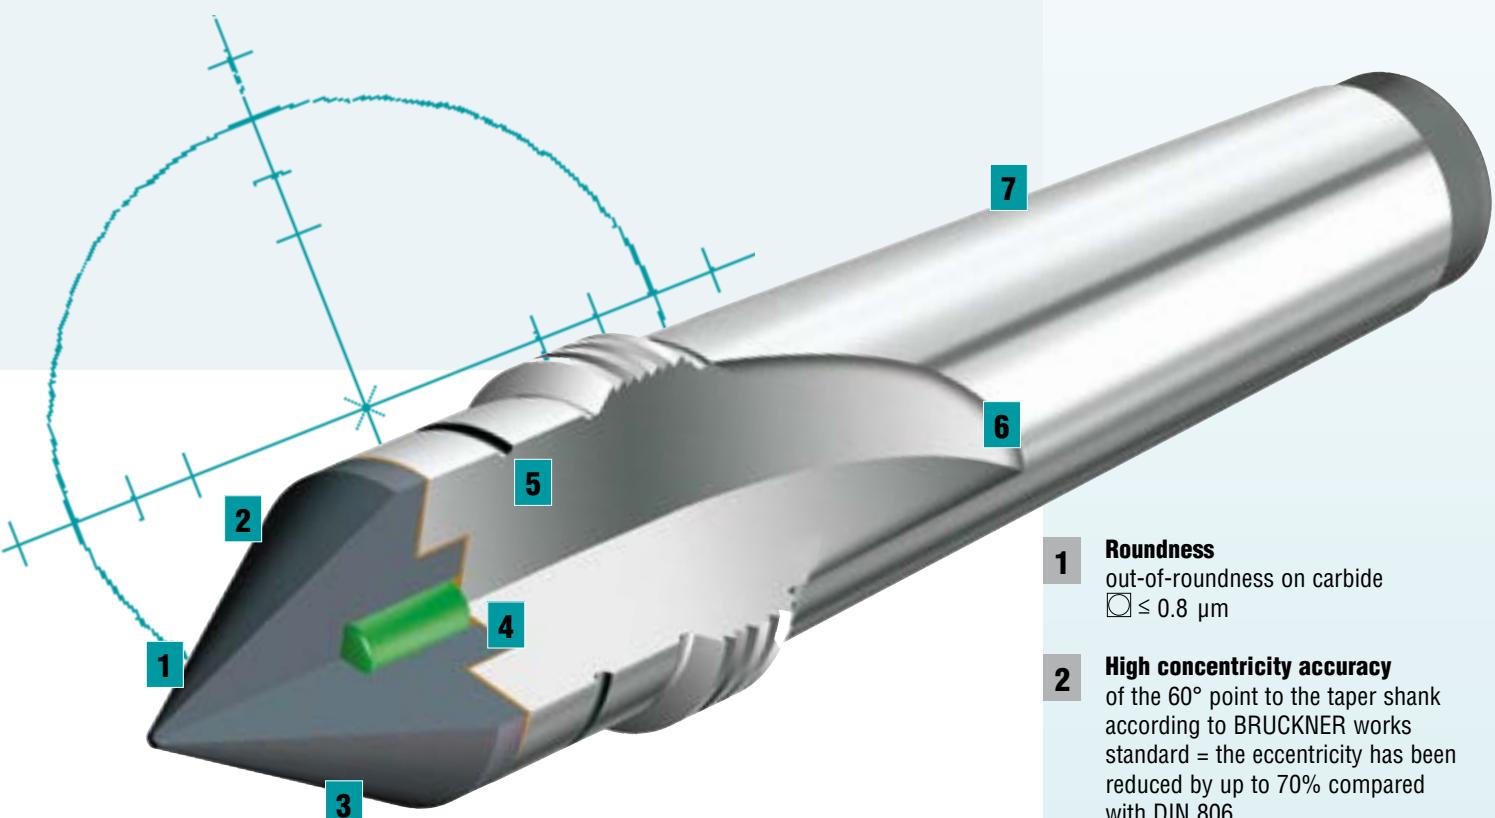

Repair service

We check the dead centre (also other makes) for:

- Damage/cracks in the carbide
- Sufficient fixing of the carbide in the base material
- Damaged taper shank

We inform you about the extent of the necessary repair/regrinding work with a cost estimate.

BRUCKNER carbide dead centres – the benchmark

Due to their superior roundness and high product quality BRUCKNER dead centres set the benchmark in terms of economic efficiency and productivity. Our know-how, our experience and our background in the high precision manufacture of our centres guarantee the features of our own products at the highest level.

The BRUCKNER guarantee for standard dead centres

Out-of-roundness $\square \leq 0.8 \mu\text{m}$.

We supply standard dead centres and special designs with **out-of-roundness $\square \leq 0.3 \mu\text{m}$.** Test report on request.

1 Roundness
out-of-roundness on carbide
 $\square \leq 0.8 \mu\text{m}$

2 High concentricity accuracy
of the 60° point to the taper shank according to BRUCKNER works standard = the eccentricity has been reduced by up to 70% compared with DIN 806

3 Top-quality carbides
safely fixed in the base material

4 sa•co® – the safety core
maximum safety through the integrated safety core (forms V, GV, Z, GZ and HZ with carbide diameter 20-45 mm)

5 Regrinding line
marking the useful end of the centre

6 Hardened taper shank
the taper is case hardened for protection from damage

7 Taper shank tolerance
deviation of taper AT4 to DIN 228 (gauge accuracy)

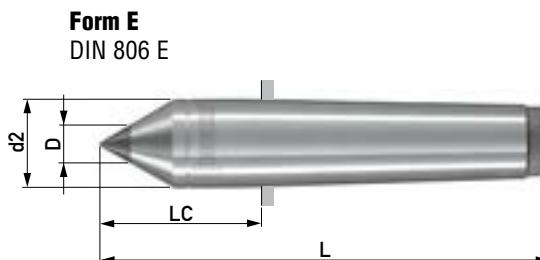

Carbide Dead Centres, Full Centre 60° without Draw-Off Thread

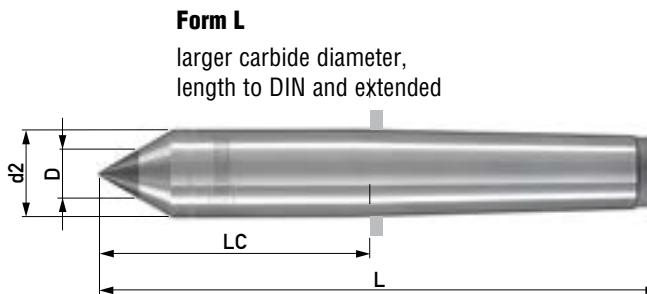

Form E – L – V

Out-of-roundness $\square \leq 0.8 \mu\text{m}$. Morse taper hardened for protection from damage. Quality features see page 54/55.

„Roundness achieves roundness“ – Grinding test with standard centres from BRUCKNER

BRUCKNER 2804H in the headstock
Out-of-roundness $\square 0.42 \mu\text{m}$

BRUCKNER 2814H in the tailstock
Out-of-roundness $\square 0.48 \mu\text{m}$

test conditions

cylindrical grinding machine STUDER S33

workpiece 100Cr6, 62 HRC, $\varnothing 35 \text{ mm}$, un-ground centre DIN 332A

workpiece
out-of-roundness $0.36 \mu\text{m}$

Result:
Out-of-roundness achieved with standard centres from BRUCKNER $\square 0.36 \mu\text{m}$.

flange mounted centres, flat and full

flange mounted carbide centres with flat and full carbide

12° driving ring

$\varnothing 52$

carbide ball

$\varnothing 20$

steep taper
with full carbide

HSK
with full carbide

open centre bore

Material

High quality tool steel,
through-hardened

Runout

See table on page 54

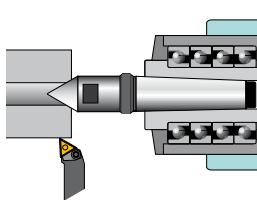

Taper shank

Manufactured in gauge accuracy to
DIN 228 ≤ AT4. This means a precise
seating of the centre in the tailstock sleeve
(see table on page 54)

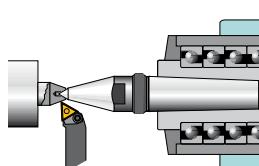

The quick solution – systematically

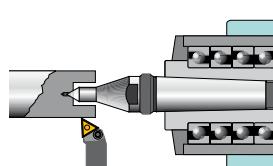

The use of BRUCKNER centres for revolving tailstock sleeves enables a flexible reaction to changing workpiece forms and turning operations.

CARBIDOR® coated tool steel dead centres for gear cutting, fine turning, finishing, measuring/inspection

CARBIDOR®

is tungsten carbide based coating especially developed to drive workpieces. The coating can be applied to all hard tool steels and particularly features wear resistance, high coefficient of friction and low coating thickness.

CARBIDOR® is applied to enhance friction between workpiece and clamping tool. In this case almost all shapes can be coated. To drive by a workpiece centre, the centre must be $\geq 4 \times 2$ mm. The axial pressure should be as high as possible.

CARBIDOR® features

Permanent connection with the carrier material, impact resistant

High hardness 74 – 78 HRC

Surface roughness:

CARBIDOR®-F Rz 15 µm

CARBIDOR®-M Rz 17 µm

CARBIDOR®-G Rz 19 µm

Coating thickness approx. 25 µm

In case of wear recoating is possible.

CARBIDOR® surface structure

CARBIDOR® coating is applicable to

- ▶ BRUCKNER standard tool steel dead centres (pages 63-65)
- ▶ tool steel dead centres in special design
- ▶ all soft, hardened components of tool steel and stainless steel, jaws, spheres, collets etc.

Please pay attention to our safety tips for process reliability of driving coatings.
